SUMMARY

Data Analyst with hands-on experience in **data cleaning, exploratory data analysis, and visualization** using tools like **Google Sheets and Looker Studio**. Skilled in transforming raw datasets into **interactive dashboards and actionable insights** to support data-driven decision-making. Experience working on real-world datasets, including **NASA exoplanet analysis, Zomato Delivery Analysis** identifying trends, biases, and discovery patterns. Strong foundation in **data storytelling, analytics workflows, and collaborative project delivery**.

TECHNICAL SKILLS

Languages: Python, SQL , Javascript

Libraries: Pandas, NumPy, Matplotlib, Seaborn

Visualization: Tableau

Tools: Excel, Google Sheets

Other: Statistics, Data Cleaning, EDA, Dashboarding

EDUCATION

Bachelor of Technology [CS & AI]

Newton School of Technology, Rishihood
University 2024-2028

PROJECTS

Netflix Data Analysis Dashboard

- Designed and developed an interactive **Netflix Data Analysis Dashboard in Tableau** to analyze **8,778 titles** across movies and TV shows.
- Performed content distribution analysis, revealing that **69.6% of Netflix titles are movies** and **30.4% are TV shows**.
- Built visualizations to identify trends in genres, ratings, and release patterns, highlighting **TV-MA** as the most common rating and **Dramas and Comedies** as the leading genres.
- Conducted temporal analysis to uncover rapid content growth after **2015** and identified **2018 as the peak release year** for Netflix titles.
- Created a Directors & Cast Intelligence dashboard that identified **Rajiv Chilaka** as the most prolific director and **Shah Rukh Khan** as the most featured actor.
- Developed advanced Tableau dashboards using KPI cards, maps, treemaps, donut charts, and interactive filters to deliver actionable insights through effective data storytelling.

Zomato Delivery & Business Analytics Dashboard

Tools: Tableau, Excel, Data Visualisation

- Analyzed **45K+ delivery records** to uncover business and operational trends
- Built **interactive Tableau dashboards** with dynamic filters (city, weather, traffic, order type)
- Tracked key KPIs: **Orders (45K+), Avg Delivery Time (~26 min), Rating (4.63)**
- Identified **77%+ demand from metro cities** and peak ordering time patterns

- Analyzed impact of **traffic & weather**, with delays rising to **~31 min in high congestion**
- Highlighted inefficiencies like **multi-order deliveries increasing time (~47 min)**

Exoplanet Discovery Analysis & Visualization Dashboard

Tools: Python, Excel

- Analyzed **5,000+ NASA exoplanet records** to uncover discovery patterns and method efficiency
- Performed **data cleaning and preprocessing**, resolving missing values, unit inconsistencies, and field standardization
- Built **pivot-table analyses** to compare **7 detection methods**, identifying **70%+ dominance of Transit method post-2009**
- Developed an **interactive Looker Studio dashboard** to visualize discovery trends, mission timelines, and planet distributions
- Identified **observational bias** (e.g., hot-Jupiter overrepresentation) using data-driven visualizations
