PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience in data cleaning, exploratory data analysis (EDA), statistical analysis, and interactive dashboard development. Proven track record of transforming raw datasets (including NASA, Netflix, and Zomato) into actionable business insights using Python, SQL, Excel, and Tableau. Passionate about leveraging data-driven decision-making to solve complex, real-world operational problems.

TECHNICAL SKILLS

Languages:	Python, SQL, JavaScript
Databases:	MySQL, MongoDB
Libraries:	Pandas, NumPy
Visualization:	Tableau, Looker Studio, Power BI
Tools:	Microsoft Excel (VLOOKUP, Charts), Google Sheets
Competencies:	Statistical Analysis, Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Interactive Dashboarding, Data Storytelling

EDUCATION

Bachelor of Technology (B.Tech.) in Computer Science & Artificial Intelligence	2024 – 2028
Newton School of Technology, Rishihood University	

KEY PROJECTS

Future of Work 2030: AI, Jobs, Salaries & Skills Analytics Dashboard

Core Techniques: Tableau, Excel/CSV, Data Analysis, Data Visualization, Dashboard Design, Calculated Fields, KPI Analytics

- Built a 4-dashboard Tableau project analyzing 500+ AI-era job records across industries.
- Developed 20+ interactive visualizations and KPIs covering AI adoption, automation risk, salary trends, skill demand, and workforce growth projections.
- Identified Technology and Finance as leading AI-driven sectors and Transportation as the highest automation-risk industry.
- Presented actionable recommendations for students, professionals, and businesses through research-backed insights.

Netflix Data Analysis & Insights Dashboard

Tableau, Excel

Core Techniques: Data Cleansing, Content Distribution Mapping, Temporal Trend Analysis, Dynamic Filtering

- Designed and developed an interactive Tableau dashboard to analyze 8,778 titles,

establishing a clear visual narrative showing 69.6% movies vs. 30.4% TV shows distribution.

- Engineered advanced visualizations including KPI cards, maps, treemaps, and donut charts with interactive filters to isolate trends, pinpointing TV-MA as the dominant rating and Dramas/Comedies as leading genres.
- Conducted temporal analysis to uncover a massive content growth surge post-2015, highlighting 2018 as the peak release year for platform titles.
- Built a Directors & Cast Intelligence view identifying Rajiv Chilaka as the most prolific director and Shah Rukh Khan as the featured actor.

Zomato Delivery & Business Analytics Dashboard

Tableau, Excel

Core Techniques: Operational Bottleneck Diagnosis, Performance Metric Tracking, Customer Segmentation

- Analyzed a comprehensive dataset of over 45,000 delivery records to diagnose logistics inefficiencies and uncover regional demand trends.
- Monitored core performance indicators, tracking total orders, average delivery times (~26 min), and average customer ratings (4.63) across diverse demographics.
- Identified critical bottleneck patterns, revealing that multi-order delivery routes increased fulfillment times by up to ~47 minutes and high traffic congestion added ~5 minutes of delay per order.
- Segmented consumer behavior data dynamically (city, weather, traffic, order type), discovering that over 77% of total platform demand originated from metro cities during peak hours.

Exoplanet Discovery Analysis & Visualization Dashboard

Python, Looker Studio

Core Techniques: Statistical Preprocessing, Multi-Method Matrix Analysis, Observational Bias Detection

- Processed and cleaned over 5,000 historical NASA exoplanet records using Pandas and NumPy, resolving missing values, inconsistent units, and standardizing data fields.
- Executed pivot-table and matrix analyses to evaluate 7 distinct planetary detection methods, proving a 70%+ statistical dominance of the Transit method post-2009.
- Built an interactive Looker Studio dashboard to visualize astronomical mission timelines, planetary distributions, and historical discovery milestones.
- Uncovered and demonstrated systematic observational bias, visually proving the overrepresentation of "hot-Jupiter" planets due to detection limits.

CERTIFICATIONS & ACHIEVEMENTS

AI Hackathon Certified Participant – Collaborated within a cross-functional team to architect innovative AI-based solutions; developed core skills in rapid problem-solving, project sprint delivery, and team synergy.
